1. Introduction

What is Shero Training Command Center?

Shero Training Command Center (TCC) is the single operating system that runs every stage of the partner journey — from the first lead call to a fully certified, go-live kitchen partner. It replaces spreadsheets, WhatsApp groups, and scattered trackers with one structured workflow shared by every team.

Why Shero needs this module

- **One source of truth** for every partner, trainer, and lead.
- **Consistent quality** — every partner receives the same training, in the same order, in the right language.
- **Faster onboarding** — automation removes repetitive work from humans.
- **Clear accountability** — every step has an owner, a status, and a timestamp.
- **Audit-ready** — practice uploads, certifications, and retraining are all logged.

Problems it solves

- Leads dropping between KOB and SFT.
- Trainers re-teaching the same lesson differently.
- No record of partner practice quality.
- Bad reviews or DD/APA issues with no structured retraining response.
- Reports built manually each week by ops.
- Unclear role permissions and missed approvals.

How the modules connect

End-to-end flow

KOB captures and qualifies leads → **Webinar** educates them → **SFT** trains the partner over 7 days → **Practice Review** validates real cooking → **Certification** issues go-live status → **Checks & Balances** watches risk daily → **Retraining** fixes problems early → **FAQ Bot** answers questions 24/7 → **Reports** give leadership visibility. **TTT Academy** keeps trainers themselves certified and scored.

2. Module Overview

The TCC sidebar is grouped by what a user does, not by what the system stores. Below is what each section contains.

Section	What it does
Dashboard	Daily KPIs across KOB, SFT, certifications, retraining and risk.
KOB Pipeline	All incoming leads with stage, owner, language and next action.
Webinar Course	Standard webinar curriculum shown to qualified leads.
Course Overview	SFT course map — 7-day structure, lessons, quizzes, practice tasks.
SFT Training	Active partner cohorts and trainer assignments.
Partners	Partner directory with status, brand, city and certification state.
Practice Review	Trainer review queue for partner photo + video uploads.
Checks & Balances	Daily risk view — bad reviews, DD/APA flags, packing issues.
FAQ Bot	Self-serve answers for leads and partners; unresolved questions escalate.
Reports	15+ operational reports with filters and CSV/Excel/PDF export.
Report Schedule	Email schedules for weekly/monthly reports to leadership.
Configuration	Master data — geography, language, departments, paths, statuses.
Test Journeys	Three demo journeys (KOB, SFT, Retraining) for QA and onboarding.
Training Command	CEO Office view of courses, completion and exceptions.
Role Management	Super-admin tool to assign and revoke roles.
TTT Academy	Train-the-trainer paths, lessons, quizzes, practical eval, scorecard.

3. Initial Setup Guide

Admin and CEO Office must complete the items below **before** the wider team is given access. Setup is a one-time activity; ongoing edits are rare.

Geography & language

- Countries the brand operates in.
- States, cities and PIN/ZIP coverage.
- Languages supported per country.

Organisation

- Departments (KOB, SFT, Ops, Tech, CEO Office, TTT).
- Roles and the permissions attached to each role.
- Trainer types (lead trainer, language trainer, practical trainer).

Training content

- Training paths (KOB, SFT 7-day, Retraining, TTT).
- Webinar module sequence and language variants.
- SFT course structure — chapters, lessons, quizzes, practice tasks.
- FAQ question bank and standard answers.

Operating rules

- KOB lead statuses (New, Contacted, Webinar Done, Docs Pending, Agreement Sent, Transferred).
- Certification rules (quiz pass score, required practice approvals).
- Retraining triggers (bad review threshold, DD/APA flag, packing complaint).
- Report schedule and recipient lists.

4. Daily Business Process Guide

A. KOB Team Process

- 1 Lead is captured (web form, referral, campaign).
- 2 Language Executive is assigned based on partner language.
- 3 First call is logged with outcome and next action.
- 4 Lead is invited to the standard **Webinar**.
- 5 **FAQ Bot** answers common questions during evaluation.
- 6 Document collection: KYC, kitchen photos, agreement draft.
- 7 Payment captured; agreement signed.
- 8 Lead is **transferred to SFT** with full handover notes.

B. SFT Training Process

- 1 Partner is assigned to a trainer and cohort.
- 2 Day 1–7 lessons are delivered in sequence.
- 3 Partner uploads **practice photos and a video** for each task.
- 4 Trainer reviews uploads in **Practice Review** and gives a verdict.
- 5 Partner completes the **final quiz**.
- 6 **Certificate** is generated automatically once quiz + practice are approved.
- 7 Partner is marked **Go-Live Ready**.

C. Retraining Process

- 1 Trigger fires — bad review, DD/APA flag, packing complaint, or QC audit fail.
- 2 Partner is enrolled in a targeted **micro-lesson**.
- 3 Partner uploads proof (photo/video) of the corrected practice.
- 4 Trainer approves; risk flag is reduced or cleared.
- 5 Outcome is logged for the weekly Retraining Report.

D. FAQ Bot Process

- 1 Lead or partner asks a question in the bot.
- 2 Bot answers from the standard FAQ bank.

- 3 If unresolved, the question is escalated to the relevant team.
- 4 Team responds and **adds the answer back into the FAQ** so the bot learns it.

5. User Role Guide

Use this table to brief each team on exactly what they own.

Role	Pages used	Daily responsibility	Approvals	Reports
CEO Office	Dashboard, Training Command, Reports	Read KPIs, spot exceptions, set direction.	Strategic exceptions only.	All weekly reports.
Admin	Configuration, Role Mgmt, Reports	Maintain master data and access.	Role changes, config changes.	Config audit, role audit.
KOB Team	KOB Pipeline, Webinar, FAQ Bot	Move leads through stages.	—	KOB Lead, Webinar Attendance.
Language Executive	KOB Pipeline, FAQ Bot	Own the first call in partner language.	—	Language Executive Report.
Trainer	SFT, Practice Review, TTT	Teach cohorts, review practice, run quizzes.	Practice + final certification.	Trainer Performance, SFT Completion.
PSE	Practice Review, Checks & Balances	Field quality checks, on-ground support.	Practice support cases.	Risk, Retraining.
Partner Team	Partners, SFT, Checks & Balances	Own the partner relationship after go-live.	Go-live readiness sign-off.	Partner Certification, Go-Live Readiness.
Support Team	FAQ Bot, Checks & Balances	Resolve escalated questions and complaints.	Complaint closure.	Bad-review, complaint reports.
Tech Team	Configuration, Test Journeys	Keep the platform healthy; run test journeys.	Tech changes only.	System & usage reports.

6. Automation Level Guide

Shero is designed for **practical** automation — fast where machines are reliable, human where judgement matters.

Level	Name	What it means
1	Assisted Automation	Humans do the work; system reminds and tracks.
2	Semi-Automated Flow	System runs the steps; humans approve key gates.
3	AI-Led Onboarding	AI teaches, scores and answers; humans handle exceptions.
4	Near No-Human Intervention	End-to-end automation; humans only sign off go-live and serious risk.

Recommended Shero model — 70 / 30

70% automated: routine teaching, reminders, FAQ answers, quiz scoring, practice intake, risk detection, report generation.

30% human control: practice quality verdict, contract exceptions, go-live approval, serious risk cases, complaint closure.

7. How to Run the Module

Follow these twelve steps in order when bringing a new team, country or brand live.

- 1 **Complete Configuration** — geography, language, roles, paths.
- 2 **Add users and assign roles** in Role Management.
- 3 **Add training content** — webinar, SFT course, FAQ, retraining micro-lessons.
- 4 **Add KOB leads** (import or live capture).
- 5 **Run the webinar flow** end-to-end with a real cohort.
- 6 **Move approved leads to SFT** with handover notes.
- 7 **Complete SFT training** day by day.
- 8 **Review practice uploads** within 24 hours of submission.
- 9 **Issue certificate** once practice + quiz pass.
- 10 **Monitor Checks & Balances** daily for risk flags.
- 11 **Trigger retraining** the moment a risk threshold is crossed.
- 12 **Review reports weekly** with CEO Office.

8. Test Journey Guide

The **Test Journeys** page is a built-in simulator. Use it to validate the platform after every config change, and to onboard new team members safely.

- **KOB Journey** — captures a demo lead, runs it through webinar and FAQ, transfers to SFT.
- **SFT Training Journey** — runs a partner through Day 1–7, practice upload, quiz and certification.
- **Retraining Journey** — fires a bad-review trigger, runs the micro-lesson, approves proof.

Important

Test Journeys are for **demo and QA only**. Do not use them as part of the real daily business process; real leads and partners must always go through the live KOB and SFT pages.

9. Reports Guide

All reports support filters, search, drill-down and export to CSV, Excel or PDF.

Report	Used by	Purpose
KOB Lead Report	KOB, CEO Office	Funnel health by stage and owner.
Webinar Attendance	KOB	Show-up rate, drop-offs, language splits.
Language Executive	KOB lead	Performance of language executives.
SFT Completion	Trainers, Partner team	Cohort completion vs plan.
Partner Certification	Partner team, CEO Office	Certified vs in-training vs blocked.
Trainer Performance	TTT, CEO Office	Quality of trainer reviews and outcomes.
Retraining Report	Ops, Support	Triggers, closures and repeat offenders.
Go-Live Readiness	Partner team	Partners ready to switch on this week.
Country-wise	CEO Office	Geo-level performance roll-up.
Brand-wise	CEO Office	Brand-level performance roll-up.
City-wise	Ops	City-level operational view.

10. Final Readiness Checklist

Sign off this checklist before declaring the module live for a region or brand.

- Configuration completed (geography, language, roles, paths).
- User roles assigned and verified in Role Management.
- Training content uploaded (webinar, SFT, retraining, FAQ).
- FAQ bank seeded with the top 50 partner questions.
- Webinar flow tested end-to-end via Test Journeys.
- SFT course tested with a demo partner.
- Practice review tested (photo + video upload + trainer verdict).
- Certificate generation tested.
- Retraining trigger tested with a demo bad-review event.
- Reports reviewed with CEO Office and scheduled for weekly delivery.
- Team trained on their role pages and daily responsibilities.
